Speedlink's ergonomic SOVOS gaming mouse takes fun and comfort to the next level

Weertzen, 6 February 2020 – Speedlink launches its first ergonomically optimised vertical RGB mouse for PC gamers, which can prevent health issues associated with long-term mouse use.

Each country has its own set of occupational health and safety regulations which, while sounding boringly bureaucratic, aim to ensure users don't suffer back, nerve or chronic pain after spending hour after hour on their computer. But what about after work? There are no government regulations watching over personal gaming desks – and many of us spend much more time there (luckily!) than we do in the office.

Speedlink has now answered the call with its SOVOS Vertical RGB Gaming Mouse – for those who place great importance on having ergonomic gaming kit, but who don't want to sacrifice on gaming performance. It combines gaming optimisations and ergonomic advantages perfectly, all backed up by powerful software for adjusting the pro-level 10,000dpi sensor and remapping its seven buttons – including the innovative mini joystick. Controlled using the thumb, this stick offers lightning-fast access to five fully programmable macros or commands such as for spell or weapon selection. In addition to ticking all the boxes for esports use, the SOVOS's design brings ergonomic comfort to gaming. Just like Speedlink's multi-award winning PIAVO and LITIKO office mice, its vertical shape promotes a natural hand posture which helps prevent strain.

The SOVOS's lighting can also be customised for a killer gaming mood, with its vibrant RGB illumination offering ten stunning effects and a choice
