## **Stunning sound and booming bass – Speedlink launches a cool-looking 2.1 subwoofer system: the GRAVITY CARBON.**

**Weertzen, 23 August 2018: With its GRAVITY CARBON, the electronics specialist Speedlink presents a 2.1 subwoofer system with thunderous bass, high-volume sound and Bluetooth® – all wrapped up in a stylish carbon design.**

The GRAVITY series is well-established at Speedlink, with ten models released since 2006. The new GRAVITY CARBON builds on this success story with new technology and a futuristic look. The active 2.1 speaker system with carbon-look wooden enclosures won't just blow users away with its thunderous bass – it also offers very high sound volumes and a massive peak power output of 120W. The bass level can be adjusted smoothly and accurately using the controller on the subwoofer, while the desktop remote offers both convenient control of the volume level and an additional 3.5mm jack input for an AUX cable. Besides being able to control the system from up to 1.5m away thanks to the wired desktop remote, wireless Bluetooth® control is also offered.

“A Bluetooth connection is much more convenient than a cable, which needs to be swapped from one device to another when changing devices. Thanks to its Bluetooth® functionality, with our speaker system users can swap between their smartphone, tablet, notebook or any other Bluetooth®-equipped device as they so wish. At the same time, the GRAVITY CARBON boasts sensational gaming and multimedia sound quality and audio performance”, explained Peter Heller, Product Manager at Speedlink.

As a computer and gaming peripherals specialist, Speedlink is renowned in this area for offering excellent value for money.
