

SPEEDLINK unveils not just one, but two new mice on the opening day of gamescom

The new DECUS RESPEC and OMNIVI Gaming Mouse

Weertzen/Cologne, 17 August 2016 – It's that time of year again in Cologne when everything focuses on games and accessories. SPEEDLINK is also making full use of the gamescom industry trade fair to present new gaming peripherals. Founded in 1998, the German brand will present two new gaming mice this year: the DECUS RESPEC, successor to the successful DECUS Gaming Mouse, featuring a new weight system, and the OMNIVI Gaming Mouse with a maximum resolution of 12,000dpi.

DECUS RESPEC – successor to the DECUS Gaming Mouse

What do you do with a successful gaming mouse? You add new features and do even more tuning-up under the hood. This is precisely what was done to the DECUS RESPEC Gaming Mouse, which gets its unveiling today. The original ergonomic shape, which led to the mouse's incredible popularity among gamers, has been kept. Just the top case was redeveloped and also redesigned. There are some new features on the base of the mouse too: an integrated weight system with 4 x 4.5g removable weights plus a new 5,000dpi optical sensor. The RRP for the new version remains the same at €49.99. It is slated to go on sale at the end of September.

New gaming mouse: the OMNIVI with 12,000dpi

The OMNIVI Gaming Mouse, which boasts 10 buttons including the scroll wheel button, has just been added to the lineup. The mouse is equipped with an optical sensor with a resolution of 12,000dpi. Its integral aluminium plate with integrated finger rest means this mouse is incredibly ergonomic, plus it feels compact. Besides its configurable illumination with 7 colours to choose from, the OMNIVI also comes with software which
