

Red Kaihua Kailh Switches on Red Aluminium

SPEEDLINK presents the ULTOR Mechanical Keyboard

Weertzen, 20 June 2016 - SPEEDLINK remains committed to gaming. With the new ULTOR keyboard, the brand which has been around since 1998 is already launching the second mechanical keyboard within a very short time. The reduced keyboard layout and the rimless design make the ULTOR a compact gaming keyboard which has the right equipment for demanding gamers. Red Kaihua Kailh switches have been installed in the new keyboard. In addition, the ULTOR offers comprehensive software for programming and attractive lighting with highlighted WASD arrow keys. The keyboard is now available for sale at an attractive €99.99 (RRP).

Gaming mode with 5 profiles and 6 macro keys

The ULTOR keyboard gives players six configurable macro buttons which can be easily reconfigured via the software. A total of five profiles are available to the player. In addition, twelve multimedia keys can be controlled via the FN keys. Of course, the ULTOR also features a switch-off function for the Windows key to avoid unpleasant interruptions in the game. The scope of functions also includes perfect anti-ghosting thanks to the N-key rollover technique and ultrapolling.

Special optics with an adjustable lighting system

The professional gaming keyboard has a switchable LED key illumination in blue. These lights can light up with varying intensity as needed. It's not just about a good-looking gaming design, but also customisable brightness while playing in darker surroundings. The WASD arrow keys are highlighted with white light.

Press Release
- For immediate release -
